

Take the Plunge !

..In the right direction!

Green Projects

Several of our projects are futuristic Carbon Dioxide (CO₂) saving ideas. They include wind-farm and solar power concepts, at the earliest concept stage, and transport reducing projects, which are more developed.

In promoting cutting edge societal, engineering and scientific advances to reduce pollution and CO₂, we recruit, or join existing, teams of world-class specialists.

Very large projects take substantial investment of time and money to shape them for presentation to politicians, financiers and the public.

Projects that require changes to the existing infrastructure or the status-quo are the most difficult to take forward – and may have to wait for the appropriate “...time and tide in the affairs of men” to generate enough energy to initiate change. This effort to bring about change requires skilled Public Relations consultants.

Active international projects currently include: (updated 09 June 2011)

SW2000 – Telework Studies - to reduce commuting and business traffic.

[Telework Guidelines](#)

The FOODTUBES Project – to reduce freight traffic [FOODTUBES](#)

Useful Green Links include:

[The Carbon Trust](#)

[Green Grants Machine](#)

[The Green Investment Bank](#)

[Department of Energy and Climate Change \(DECC\)](#)
